

CRICH JOVED VERIDIANO

Junior AI Engineer

Email: veridianocrich@gmail.com | Phone: +63-966-224-758
GitHub: github.com/Cjoved | Location: Nagcarlan, Laguna, Philippines

PROFESSIONAL SUMMARY

AI Engineer with **1+ year** of production experience shipping multi-agent LLM systems (LangChain, LangGraph, CrewAI), computer vision pipelines (YOLO, PyTorch), and RAG/vector search backends (Qdrant, FastAPI) — owning projects end-to-end from requirements through deployment in real-world agricultural applications.

TECHNICAL SKILLS

Programming & Scripting	Python, SQL, JavaScript
AI/ML/DL Frameworks	PyTorch, TensorFlow (basic), scikit-learn, YOLO (Ultralytics), spaCy
LLMs & Agentic Systems	LangChain, LangGraph, CrewAI, Prompt Engineering, OpenRouter (Mistral, DeepSeek, OpenChat), Moonshot AI (Kimi), Google Gemini
NLP & Document Intelligence	Embeddings (e5-base-v2, bge-small), Sentiment Analysis, OCR (Tesseract), PDF Processing (Docling, PyMuPDF)
Backend & APIs	FastAPI, Node.js, Express.js, RESTful API Design, Swagger/OpenAPI
Data & Databases	PostgreSQL, MySQL, Firestore (Firebase), Qdrant, Redis
Tools & Platforms	Git, Docker, Chainlit, Scraping/Playwright, FlareSolvrr, Jupyter Notebook, Google Colab, Langfuse (LLM Observability), Wasabi (S3)

PROFESSIONAL EXPERIENCE

Junior AI Engineer

Leads Agricultural Product Corporation | Laguna, Philippines | July 2025 – Present

- Own full lifecycle development of production AI systems — from stakeholder requirements gathering and architecture design through implementation, deployment, and documentation.
- Build and integrate agentic LLM systems, computer vision models, and data pipelines across survey automation, document evaluation, and crop disease detection use cases.
- Ensure code quality and system robustness through testing, Docker containerization, and LLM observability (Langfuse).

Key Projects

Agent Scraper

Agentic Data, Search & Conversational AI Platform for Philippine Agriculture

Tech Stack: Python 3.12, FastAPI, LangChain, DeepSeek, Kimi (fallback), Qdrant, Scraping/Playwright, FlareSolvrr, Chainlit, Docker, Wasabi (S3)

- Designed and deployed an end-to-end agentic data platform unifying 6 public Philippine agricultural data sources into a single reusable intelligence backend for downstream applications.
- Built layered multi-source scrapers (HTTP APIs + headless-browser automation) with validation, checkpointing, and dual CSV/JSONL data contracts to standardize structured and unstructured content.
- Engineered a **LangChain**-based read-only reasoning agent (DeepSeek primary, Kimi fallback) with intent classification, query planning, and tool-scope guardrails, returning confidence-scored, source-grounded answers.
- Architected a dual-collection **Qdrant** search layer (structured + semantic) exposed through a versioned FastAPI service with tiered API-key auth and rate limiting.
- Automated the data lifecycle with a cron orchestrator (11 scheduled jobs), Wasabi-backed backups, and Telegram/Discord dev alerts; shipped a **Chainlit** chat UI and deployed the full Dockerized stack to production on Hostinger — built for future integration with Digisaka.

Agentic AI Survey System

AI-Powered Survey Generation & Analysis Platform

Tech Stack: Python, FastAPI, LangChain, LangGraph, OpenRouter (LLMs), Google Gemini, Qdrant, PostgreSQL, Docling, Langfuse

- Designed a production-ready FastAPI backend with a 4-agent architecture automating the end-to-end survey lifecycle — conversational generation, document extraction, knowledge-base search, and response analysis.
- Built a 9-stage **LangGraph** agentic workflow with episodic memory that learns from past successful surveys to improve future generation quality.
- Architected a multi-collection **Qdrant** system with hybrid semantic+keyword search integrated with PostgreSQL for structured data.
- Developed statistical and sentiment analysis pipelines with LLM-generated executive summaries, backed by full LLM observability (Langfuse) with prompt management and A/B testing.

Digisaka — AI Price Import & Analytics Module

Agricultural Price Intelligence Module

Tech Stack: Laravel, PHP, Vue 3, MySQL, Moonshot AI (Kimi Vision), Chart.js, ApexCharts

- Designed an end-to-end AI Import workflow where **Kimi's vision API** extracts province, city, crop, variety, and price data directly from user-uploaded social-media screenshots via domain-specific prompts (English/Filipino).
- Built **Laravel** extraction/save APIs with validation contracts, image compression, and polymorphic source attachments linking each price row back to its source image; implemented a **Vue 3** drawer UX for multi-image queueing, async extraction, and bulk save.
- Developed a price analytics dashboard with regional filters, history/distribution charts, and period-over-period comparison (avg/median/min/max, % change) backed by Laravel aggregation APIs.

Agentic AI Evaluator

Multi-Agent Agricultural Trial Evaluation System

Tech Stack: Python, FastAPI, LangGraph, CrewAI, LangChain, Google Gemini, Qdrant, Redis/ARQ

- Designed an 8-stage **LangGraph** workflow with quality gates and confidence-based automatic retries to process agricultural trial PDFs, paired with a **CrewAI** 4-agent collaborative evaluation layer.
- Built a conversational agent with 33 specialized tools and semantic search over Qdrant, supporting Taglish/Filipino/English responses with Redis+ARQ async job processing.

Additional Projects

- **Black Sigatoka Early Stage Detection** — End-to-end YOLO12n computer vision pipeline detecting 7 banana leaf disease stages, containerized with Docker for low-latency FastAPI inference.
- **RHive (Thesis/Capstone Management System)** — Led an IMRaD manuscript-generation module (Python/FastAPI + LLM prompts) integrated into a React/Node.js platform; contributed to a system rated 4.4/5 (Effective/Highly Effective) under ISO 25010:2023.
- **AI Intern – Conversational Support & Ticketing System** (Leads Agricultural Product Corp., Feb–Apr 2025) — Helped build a FastAPI + LangChain support agent routing queries by intent/tone across multiple LLMs (OpenRouter), with ticketing workflow and streaming chat API.

EDUCATION

Bachelor of Science in Computer Science, Specialized in Data Science

Laguna University | Sta. Cruz, Laguna | Graduated June 2025

Relevant Coursework: Machine Learning, Deep Learning, NLP, AI, Software Engineering

CERTIFICATIONS & TRAINING

- Generative AI in Practice — Sololearn (August 2025)
- Prompt Engineering Applications — Simplilearn SkillUp (August 2025)
- AI Game Development — LUCSO (May 2024)
- Microsoft Copilot Training — LUCSO (May 2024)
